

DEQ-EPA Meeting on January 17

Topic: Stormwater Source Control in Portland Harbor

Objective: DEQ will provide EPA with an overview of DEQ's Comprehensive Stormwater Source Control Strategy and report on progress to date.

Desired Outcome: Shared understanding and support for DEQ's program for achieving stormwater source control on a schedule that supports EPA's schedule for cleanup of the river.

Agenda

1. Provide an overview of DEQ's comprehensive stormwater strategy and describe how it will evolve as we move through different stages of the CERCLA process, e.g.:
 - Pre-Risk Assessment
 - Pre-Record of Decision
 - RD/RA
 - Long Term Oversight and Monitoring
2. Present a summary of DEQ's efforts and accomplishments during the Pre-Risk Assessment phase of the process
 - Describe the approaches for identifying new sources; demonstrate these with a "case study" of source identification efforts in Outfall Basin 18
 - Describe DEQ's current rationale for determining stormwater source control has been achieved at individual sites
 - Report on the current status and schedule for completing stormwater source control at upland sites for the Pre-Risk Assessment stage
3. Present results of the latest round of stormwater modeling which incorporates LWG data and our thoughts on how it informs our efforts
4. Group discussion of strategy, progress, and follow-up needs
